Contents

Preface

I Introduction

- Lesson Objectives I-2
- Goals of the Course I-3
- Oracle10g I-4
- Oracle Database 10g I-6
- Oracle Application Server 10g I-7
- Oracle Enterprise Manager 10g Grid Control I-8
- Relational and Object Relational Database Management Systems I-9
- Oracle Internet Platform I-10
- System Development Life Cycle I-11
- Data Storage on Different Media I-13
- Relational Database Concept I-14
- Definition of a Relational Database I-15
- Data Models I-16
- Entity Relationship Model I-17
- Entity Relationship Modeling Conventions I-19
- Relating Multiple Tables I-21
- Relational Database Terminology I-23
- Relational Database Properties I-25
- Communicating with an RDBMS Using SQL I-26
- Oracle's Relational Database Management System I-27
- SQL Statements I-28
- Tables Used in the Course I-29
- Summary I-30

1 Retrieving Data Using the SQL `SELECT` Statement

- Objectives 1-2
- Capabilities of SQL `SELECT` Statements 1-3
- Basic `SELECT` Statement 1-4
- Selecting All Columns 1-5
- Selecting Specific Columns 1-6
- Writing SQL Statements 1-7
- Column Heading Defaults 1-8

Arithmetic Expressions	1-9
Using Arithmetic Operators	1-10
Operator Precedence	1-11
Defining a Null Value	1-12
Null Values in Arithmetic Expressions	1-13
Defining a Column Alias	1-14
Using Column Aliases	1-15
Concatenation Operator	1-16
Literal Character Strings	1-17
Using Literal Character Strings	1-18
Alternative Quote (q) Operator	1-19
Duplicate Rows	1-20
SQL and iSQL*Plus Interaction	1-21
SQL Statements Versus iSQL*Plus Commands	1-22
Overview of iSQL*Plus	1-23
Logging In to iSQL*Plus	1-24
iSQL*Plus Environment	1-25
Displaying Table Structure	1-26
Interacting with Script Files	1-28
iSQL*Plus History Page	1-32
Setting iSQL*Plus Preferences	1-34
Setting the Output Location Preference	1-35
Summary	1-36
Practice 1: Overview	1-37

2 Restricting and Sorting Data

Objectives	2-2
Limiting Rows Using a Selection	2-3
Limiting the Rows That Are Selected	2-4
Using the WHERE Clause	2-5
Character Strings and Dates	2-6
Comparison Conditions	2-7
Using Comparison Conditions	2-8
Using the BETWEEN Condition	2-9
Using the IN Condition	2-10
Using the LIKE Condition	2-11
Using the NULL Conditions	2-13
Logical Conditions	2-14
Using the AND Operator	2-15

Using the <code>OR</code> Operator	2-16
Using the <code>NOT</code> Operator	2-17
Rules of Precedence	2-18
Using the <code>ORDER BY</code> Clause	2-20
Sorting	2-21
Substitution Variables	2-22
Using the <code>&</code> Substitution Variable	2-24
Character and Date Values with Substitution Variables	2-26
Specifying Column Names, Expressions, and Text	2-27
Using the <code>&&</code> Substitution Variable	2-28
Using the <code>iSQL*Plus DEFINE</code> Command	2-29
Using the <code>VERIFY</code> Command	2-30
Summary	2-31
Practice 2: Overview	2-32
3 Using Single-Row Functions to Customize Output	
Objectives	3-2
SQL Functions	3-3
Two Types of SQL Functions	3-4
Single-Row Functions	3-5
Character Functions	3-7
Case-Manipulation Functions	3-9
Using Case-Manipulation Functions	3-10
Character-Manipulation Functions	3-11
Using the Character-Manipulation Functions	3-12
Number Functions	3-13
Using the <code>ROUND</code> Function	3-14
Using the <code>TRUNC</code> Function	3-15
Using the <code>MOD</code> Function	3-16
Working with Dates	3-17
Arithmetic with Dates	3-20
Using Arithmetic Operators with Dates	3-21
Date Functions	3-22
Using Date Functions	3-23
Practice 3: Overview of Part 1	3-25
Conversion Functions	3-26
Implicit Data Type Conversion	3-27
Explicit Data Type Conversion	3-29
Using the <code>TO_CHAR</code> Function with Dates	3-32
Elements of the Date Format Model	3-33

- Using the `TO_CHAR` Function with Dates 3-37
- Using the `TO_CHAR` Function with Numbers 3-38
- Using the `TO_NUMBER` and `TO_DATE` Functions 3-41
- RR Date Format 3-43
- Example of RR Date Format 3-44
- Nesting Functions 3-45
- General Functions 3-47
- NVL Function 3-48
- Using the NVL Function 3-49
- Using the NVL2 Function 3-50
- Using the NULLIF Function 3-51
- Using the COALESCE Function 3-52
- Conditional Expressions 3-54
- CASE Expression 3-55
- Using the CASE Expression 3-56
- DECODE Function 3-57
- Using the DECODE Function 3-58
- Summary 3-60
- Practice 3: Overview of Part 2 3-61

4 Reporting Aggregated Data Using the Group Functions

- Objectives 4-2
- What Are Group Functions? 4-3
- Types of Group Functions 4-4
- Group Functions: Syntax 4-5
- Using the AVG and SUM Functions 4-6
- Using the MIN and MAX Functions 4-7
- Using the COUNT Function 4-8
- Using the DISTINCT Keyword 4-9
- Group Functions and Null Values 4-10
- Creating Groups of Data 4-11
- Creating Groups of Data: GROUP BY Clause Syntax 4-12
- Using the GROUP BY Clause 4-13
- Grouping by More Than One Column 4-15
- Using the GROUP BY Clause on Multiple Columns 4-16
- Illegal Queries Using Group Functions 4-17
- Restricting Group Results 4-19
- Restricting Group Results with the HAVING Clause 4-20
- Using the HAVING Clause 4-21

Nesting Group Functions	4-23
Summary	4-24
Practice 4: Overview	4-25
5 Displaying Data from Multiple Tables	
Objectives	5-2
Obtaining Data from Multiple Tables	5-3
Types of Joins	5-4
Joining Tables Using SQL:1999 Syntax	5-5
Creating Natural Joins	5-6
Retrieving Records with Natural Joins	5-7
Creating Joins with the <code>USING</code> Clause	5-8
Joining Column Names	5-9
Retrieving Records with the <code>USING</code> Clause	5-10
Qualifying Ambiguous Column Names	5-11
Using Table Aliases	5-12
Creating Joins with the <code>ON</code> Clause	5-13
Retrieving Records with the <code>ON</code> Clause	5-14
Self-Joins Using the <code>ON</code> Clause	5-15
Applying Additional Conditions to a Join	5-17
Creating Three-Way Joins with the <code>ON</code> Clause	5-18
Nonequijoins	5-19
Retrieving Records with Nonequijoins	5-20
Outer Joins	5-21
<code>INNER</code> Versus <code>OUTER</code> Joins	5-22
<code>LEFT OUTER JOIN</code>	5-23
<code>RIGHT OUTER JOIN</code>	5-24
<code>FULL OUTER JOIN</code>	5-25
Cartesian Products	5-26
Generating a Cartesian Product	5-27
Creating <code>Cross</code> Joins	5-28
Summary	5-29
Practice 5: Overview	5-30
6 Using Subqueries to Solve Queries	
Objectives	6-2
Using a Subquery to Solve a Problem	6-3
Subquery Syntax	6-4
Using a Subquery	6-5
Guidelines for Using Subqueries	6-6

- Types of Subqueries 6-7
- Single-Row Subqueries 6-8
- Executing Single-Row Subqueries 6-9
- Using Group Functions in a Subquery 6-10
- The `HAVING` Clause with Subqueries 6-11
- What Is Wrong with This Statement? 6-12
- Will This Statement Return Rows? 6-13
- Multiple-Row Subqueries 6-14
- Using the `ANY` Operator in Multiple-Row Subqueries 6-15
- Using the `ALL` Operator in Multiple-Row Subqueries 6-16
- Null Values in a Subquery 6-17
- Summary 6-19
- Practice 6: Overview 6-20

7 Using the Set Operators

- Objectives 7-2
- Set Operators 7-3
- Tables Used in This Lesson 7-4
- `UNION` Operator 7-8
- Using the `UNION` Operator 7-9
- `UNION ALL` Operator 7-11
- Using the `UNION ALL` Operator 7-12
- `INTERSECT` Operator 7-13
- Using the `INTERSECT` Operator 7-14
- `MINUS` Operator 7-15
- Set Operator Guidelines 7-17
- The Oracle Server and Set Operators 7-18
- Matching the `SELECT` Statements 7-19
- Matching the `SELECT` Statement: Example 7-20
- Controlling the Order of Rows 7-21
- Summary 7-23
- Practice 7: Overview 7-24

8 Manipulating Data

- Objectives 8-2
- Data Manipulation Language 8-3
- Adding a New Row to a Table 8-4
- `INSERT` Statement Syntax 8-5
- Inserting New Rows 8-6
- Inserting Rows with Null Values 8-7

Inserting Special Values	8-8
Inserting Specific Date Values	8-9
Creating a Script	8-10
Copying Rows from Another Table	8-11
Changing Data in a Table	8-12
UPDATE Statement Syntax	8-13
Updating Rows in a Table	8-14
Updating Two Columns with a Subquery	8-15
Updating Rows Based on Another Table	8-16
Removing a Row from a Table	8-17
DELETE Statement	8-18
Deleting Rows from a Table	8-19
Deleting Rows Based on Another Table	8-20
TRUNCATE Statement	8-21
Using a Subquery in an INSERT Statement	8-22
Database Transactions	8-24
Advantages of COMMIT and ROLLBACK Statements	8-26
Controlling Transactions	8-27
Rolling Back Changes to a Marker	8-28
Implicit Transaction Processing	8-29
State of the Data Before COMMIT or ROLLBACK	8-31
State of the Data After COMMIT	8-32
Committing Data	8-33
State of the Data After ROLLBACK	8-34
Statement-Level Rollback	8-36
Read Consistency	8-37
Implementation of Read Consistency	8-38
Summary	8-39
Practice 8: Overview	8-40
9 Using DDL Statements to Create and Manage Tables	
Objectives	9-2
Database Objects	9-3
Naming Rules	9-4
CREATE TABLE Statement	9-5
Referencing Another User's Tables	9-6
DEFAULT Option	9-7
Creating Tables	9-8
Data Types	9-9
Datetime Data Types	9-11

- Including Constraints 9-17
- Constraint Guidelines 9-18
- Defining Constraints 9-19
- NOT NULL Constraint 9-21
- UNIQUE Constraint 9-22
- PRIMARY KEY Constraint 9-24
- FOREIGN KEY Constraint 9-25
- FOREIGN KEY Constraint: Keywords 9-27
- CHECK Constraint 9-28
- CREATE TABLE: Example 9-29
- Violating Constraints 9-30
- Creating a Table by Using a Subquery 9-32
- ALTER TABLE Statement 9-34
- Dropping a Table 9-35
- Summary 9-36
- Practice 9: Overview 9-37

10 Creating Other Schema Objects

- Objectives 10-2
- Database Objects 10-3
- What Is a View? 10-4
- Advantages of Views 10-5
- Simple Views and Complex Views 10-6
- Creating a View 10-7
- Retrieving Data from a View 10-10
- Modifying a View 10-11
- Creating a Complex View 10-12
- Rules for Performing DML Operations on a View 10-13
- Using the WITH CHECK OPTION Clause 10-16
- Denying DML Operations 10-17
- Removing a View 10-19
- Practice 10: Overview of Part 1 10-20
- Sequences 10-21
- CREATE SEQUENCE Statement: Syntax 10-23
- Creating a Sequence 10-24
- NEXTVAL and CURRVAL Pseudocolumns 10-25
- Using a Sequence 10-27
- Caching Sequence Values 10-28
- Modifying a Sequence 10-29
- Guidelines for Modifying a Sequence 10-30

Indexes	10-31
How Are Indexes Created?	10-33
Creating an Index	10-34
Index Creation Guidelines	10-35
Removing an Index	10-36
Synonyms	10-37
Creating and Removing Synonyms	10-39
Summary	10-40
Practice 10: Overview of Part 2	10-41
11 Managing Objects with Data Dictionary Views	
Objectives	11-2
The Data Dictionary	11-3
Data Dictionary Structure	11-4
How to Use the Dictionary Views	11-6
USER_OBJECTS and ALL_OBJECTS Views	11-7
USER_OBJECTS View	11-8
Table Information	11-9
Column Information	11-10
Constraint Information	11-12
View Information	11-15
Sequence Information	11-16
Synonym Information	11-18
Adding Comments to a Table	11-19
Summary	11-20
Practice 11: Overview	11-21
A Practice Solutions	
B Table Descriptions and Data	
C Oracle Join Syntax	
D Using SQL*Plus	
E Using SQL Developer	
Index	

Additional Practices

Additional Practices: Table Descriptions and Data

Additional Practices: Solutions

Preface

Profile

Before You Begin This Course

Before you begin this course, you should be able to use a graphical user interface (GUI). The prerequisite is a familiarity with data processing concepts and techniques.

How This Course Is Organized

Oracle Database 10g: SQL Fundamentals I is an instructor-led course featuring lectures and hands-on exercises. Online demonstrations and written practice sessions reinforce the concepts and skills that are introduced.

Related Publications

Oracle Publications

Title	Part Number
<i>Oracle® Database Reference 10g Release 2 (10.2)</i>	B14237-02
<i>Oracle® Database SQL Reference 10g Release 2 (10.2)</i>	B14200-02
<i>Oracle® Database Concepts 10g Release 2 (10.2)</i>	B14220-02
<i>Oracle® Database Application Developer's Guide - Fundamentals 10g Release 2 (10.2)</i>	B14251-01
<i>SQL*Plus® User's Guide and Reference</i>	B14357-01

Additional Publications

- System release bulletins
- Installation and user's guides
- *read.me* files
- International Oracle User's Group (IOUG) articles
- *Oracle Magazine*

Typographic Conventions

What follows are two lists of typographical conventions that are used specifically within text or within code.

Typographic Conventions Within Text

Convention	Object or Term	Example
Uppercase	Commands, functions, column names, table names, PL/SQL objects, schemas	Use the <code>SELECT</code> command to view information stored in the <code>LAST_NAME</code> column of the <code>EMPLOYEES</code> table.
Lowercase, italic	Filenames, syntax variables, usernames, passwords	where: <i>role</i> is the name of the role to be created.
Initial cap	Trigger and button names	Assign a When-Validate-Item trigger to the ORD block. Choose Cancel.
Italic	Books, names of courses and manuals, and emphasized words or phrases	For more information on the subject see <i>Oracle SQL Reference Manual</i> Do <i>not</i> save changes to the database.
Quotation marks	Lesson module titles referenced within a course	This subject is covered in Lesson 3, “Working with Objects.”

Typographic Conventions (continued)

Typographic Conventions Within Code

Convention	Object or Term	Example
Uppercase	Commands, functions	<code>SELECT employee_id FROM employees;</code>
Lowercase, italic	Syntax variables	<code>CREATE ROLE <i>role</i>;</code>
Initial cap	Forms triggers	<code>Form module: ORD Trigger level: S_ITEM.QUANTITY item Trigger name: When-Validate-Item . . .</code>
Lowercase	Column names, table names, filenames, PL/SQL objects	<code>. . . OG_ACTIVATE_LAYER (OG_GET_LAYER ('prod_pie_layer')) . . . SELECT last_name FROM employees;</code>
Bold	Text that must be entered by a user	<code>CREATE USER scott IDENTIFIED BY tiger;</code>

Additional Practices

Additional Practices

These exercises can be used for extra practice after you have discussed the following topics: basic SQL `SELECT` statement, basic *iSQL*Plus* commands, and SQL functions.

1. The HR department needs to find data for all of the clerks who were hired after the year 1997.

EMPLOYEE_ID	FIRST_NAME	LAST_NAME	EMAIL	PHONE_NUMBER	HIRE_DATE	
143	Randall	Matos	RMATOS	650.121.2874	15-MAR-98	S
144	Peter	Vargas	PVARGAS	650.121.2004	09-JUL-98	S

2. The HR department needs a report of employees who earn commission. Show the last name, job, salary, and commission of those employees. Sort the data by salary in descending order.

LAST_NAME	JOB_ID	SALARY	COMMISSION_PCT
Abel	SA_REP	11000	.3
Zlotkey	SA_MAN	10500	.2
Taylor	SA_REP	8600	.2
Grant	SA_REP	7000	.15

Additional Practices (continued)

3. For budgeting purposes, the HR department needs a report on projected raises. The report should display those employees who have no commission but who have a 10% raise in salary (round off the salaries).

New salary
The salary of King after a 10% raise is 26400
The salary of Kochhar after a 10% raise is 18700
The salary of De Haan after a 10% raise is 18700
The salary of Hunold after a 10% raise is 9900
The salary of Ernst after a 10% raise is 6600
The salary of Lorentz after a 10% raise is 4620
The salary of Mourgos after a 10% raise is 6380
The salary of Rajs after a 10% raise is 3850
The salary of Davies after a 10% raise is 3410
The salary of Matos after a 10% raise is 2860
The salary of Vargas after a 10% raise is 2750
The salary of Whalen after a 10% raise is 4840
The salary of Hartstein after a 10% raise is 14300
The salary of Fay after a 10% raise is 6600
The salary of Higgins after a 10% raise is 13200
The salary of Gietz after a 10% raise is 9130

16 rows selected.

Additional Practices (continued)

4. Create a report of employees and their length of employment. Show the last names of all employees together with the number of years and the number of completed months that they have been employed. Order the report by the length of their employment. The employee who has been employed the longest should appear at the top of the list.

LAST_NAME	YEARS	MONTHS
King	16	7
Whalen	16	4
Kochhar	14	4
Hunold	14	0
Ernst	12	8

• • •

Mourgos	4	2
Zlotkey	3	11

20 rows selected.

5. Show those employees who have a last name starting with the letters *J*, *K*, *L*, or *M*.

LAST_NAME
King
Kochhar
Lorentz
Matos
Mourgos

6. Create a report that displays all employees, and indicate with the words *Yes* or *No* whether they receive a commission. Use the `DECODE` expression in your query.

Note: Results are continued on next page.

LAST_NAME	SALARY	COMMISSIO
King	24000	No
Kochhar	17000	No
De Haan	17000	No
Hunold	9000	No
Ernst	6000	No
Lorentz	4200	No
Mourgos	5800	No
Rajs	3500	No

Additional Practices (continued)

6. (continued)

Davies	3100	No
Matos	2600	No
Vargas	2500	No
Zlotkey	10500	Yes
Abel	11000	Yes
Taylor	8600	Yes
Grant	7000	Yes
Whalen	4400	No
Hartstein	13000	No
Fay	6000	No
Higgins	12000	No
Gietz	8300	No

20 rows selected.

Additional Practices (continued)

These exercises can be used for extra practice after you have discussed the following topics: basic SQL `SELECT` statement, basic *iSQL*Plus* commands, SQL functions, joins, and group functions.

7. Create a report that displays the department name, location, name, job title, and salary of those employees who work in a specific location. Prompt the user for the location. For example, if the user enters 1800, these are the results:

DEPARTMENT_NAME	LOCATION_ID	LAST_NAME	JOB_ID	SALARY
Marketing	1800	Hartstein	MK_MAN	13000
Marketing	1800	Fay	MK_REP	6000

8. Find the number of employees who have a last name that ends with the letter *n*. Create two possible solutions.

COUNT(*)
3

9. Create a report that shows the name, location, and number of employees for each department. Make sure that the report also includes departments without employees.

DEPARTMENT_ID	DEPARTMENT_NAME	LOCATION_ID	COUNT (E.EMPLOYEE_ID)
10	Administration	1700	1
20	Marketing	1800	2
50	Shipping	1500	5
60	IT	1400	3
80	Sales	2500	3
90	Executive	1700	3
110	Accounting	1700	2
190	Contracting	1700	0

8 rows selected.

Additional Practices (continued)

10. The HR department needs to find the job titles in departments 10 and 20. Create a report to display the job IDs for those departments.

JOB_ID
AD_ASST
MK_MAN
MK_REP

11. Create a report that displays the jobs that are found in the Administration and Executive departments. Also display the number of employees for these jobs. Show the job with the highest number of employees first.

JOB_ID	FREQUENCY
AD_VP	2
AD_ASST	1
AD_PRES	1

Additional Practices (continued)

These exercises can be used for extra practice after you have discussed the following topics: basic SQL `SELECT` statements, basic *iSQL*Plus* commands, SQL functions, joins, group functions, and subqueries.

12. Show all employees who were hired in the first half of the month (before the 16th of the month).

LAST_NAME	HIRE_DATE
De Haan	13-JAN-93
Hunold	03-JAN-90
Lorentz	07-FEB-99
Matos	15-MAR-98
Vargas	09-JUL-98
Abel	11-MAY-96
Higgins	07-JUN-94
Gietz	07-JUN-94

8 rows selected.

13. Create a report that displays the following for all employees: last name, salary, and salary expressed in terms of thousands of dollars.

Note: Results are continued on next page.

LAST_NAME	SALARY	THOUSANDS
King	24000	24
Kochhar	17000	17
De Haan	17000	17
Hunold	9000	9
Ernst	6000	6
Lorentz	4200	4
Mourgos	5800	5
Rajs	3500	3
Davies	3100	3
Matos	2600	2

...

Additional Practices (continued)

13. (continued)

Vargas	2500	2
Zlotkey	10500	10
Abel	11000	11
Taylor	8600	8
Grant	7000	7
Whalen	4400	4
Hartstein	13000	13
Fay	6000	6
Higgins	12000	12
Gietz	8300	8

20 rows selected.

14. Show all employees who have managers with a salary higher than \$15,000. Show the following data: employee name, manager name, manager salary, and salary grade of the manager.

LAST_NAME	MANAGER	SALARY	GRADE_LEV
Whalen	Kochhar	17000	E
Higgins	Kochhar	17000	E
Hunold	De Haan	17000	E
Kochhar	King	24000	E
De Haan	King	24000	E
Mourgos	King	24000	E
Zlotkey	King	24000	E
Hartstein	King	24000	E

8 rows selected.

Additional Practices (continued)

15. Show the department number, name, number of employees, and average salary of all departments, together with the names, salaries, and jobs of the employees working in each department.

DEPARTMENT_ID	DEPARTMENT_NAME	EMPLOYEES	AVG_SAL	LAST_NAME	SALARY
10	Administration	1	4400.00	Whalen	4400
20	Marketing	2	9500.00	Fay	6000
20	Marketing	2	9500.00	Hartstein	13500
50	Shipping	5	3500.00	Rajs	3500
50	Shipping	5	3500.00	Matos	2100
50	Shipping	5	3500.00	Davies	3500
50	Shipping	5	3500.00	Vargas	2100
50	Shipping	5	3500.00	Mourgos	5500
60	IT	3	6400.00	Ernst	6000
60	IT	3	6400.00	Hunold	9000
60	IT	3	6400.00	Lorentz	4800
80	Sales	3	10033.33	Abel	11000
80	Sales	3	10033.33	Taylor	8000
80	Sales	3	10033.33	Zlotkey	10500
90	Executive	3	19333.33	King	24000
90	Executive	3	19333.33	De Haan	17000
90	Executive	3	19333.33	Kochhar	17000
110	Accounting	2	10150.00	Gietz	8000
110	Accounting	2	10150.00	Higgins	12000
190	Contracting	0	No average		

20 rows selected.

16. Create a report to display the department number and lowest salary of the department with the highest average salary.

DEPARTMENT_ID	MIN(SALARY)
90	17000

Additional Practices (continued)

17. Create a report that displays departments where no sales representatives work. Include the department number, department name, and location in the output.

DEPARTMENT_ID	DEPARTMENT_NAME	MANAGER_ID	LOCATION_ID
10	Administration	200	1700
20	Marketing	201	1800
50	Shipping	124	1500
60	IT	103	1400
90	Executive	100	1700
110	Accounting	205	1700
190	Contracting		1700

7 rows selected.

18. Create the following statistical reports for the HR department: Include the department number, department name, and the number of employees working in each department that:
- Employs fewer than three employees:

DEPARTMENT_ID	DEPARTMENT_NAME	COUNT(*)
10	Administration	1
20	Marketing	2
110	Accounting	2

- Has the highest number of employees:

DEPARTMENT_ID	DEPARTMENT_NAME	COUNT(*)
50	Shipping	5

- Has the lowest number of employees:

DEPARTMENT_ID	DEPARTMENT_NAME	COUNT(*)
10	Administration	1

Additional Practices (continued)

19. Create a report that displays the employee number, last name, salary, department number, and the average salary in their department for all employees.

EMPLOYEE_ID	LAST_NAME	DEPARTMENT_ID	SALARY	AVG (S.SALARY)
206	Gietz	80	8300	9600
149	Zlotkey	80	10500	9600
174	Abel	80	11000	9600
144	Vargas	50	2500	3500
101	Kochhar	90	17000	19333.3333
100	King	90	24000	19333.3333
103	Hunold	60	9000	6400
142	Davies	50	3100	3500
205	Higgins	110	12000	12000
104	Ernst	60	6000	6400
143	Matos	50	2600	3500
102	De Haan	90	17000	19333.3333
107	Lorentz	60	4200	6400
141	Rajs	50	3500	3500
200	Whalen	10	4400	4400
202	Fay	20	6000	9500
176	Taylor	80	8600	9600
201	Hartstein	20	13000	9500
124	Mourgos	50	5800	3500

19 rows selected.

20. Show all employees who were hired on the day of the week on which the highest number of employees were hired.

LAST_NAME	DAY
Ernst	TUESDAY
Mourgos	TUESDAY
Rajs	TUESDAY
Taylor	TUESDAY
Higgins	TUESDAY
Gietz	TUESDAY

6 rows selected.

Additional Practices (continued)

21. Create an anniversary overview based on the hire date of the employees. Sort the anniversaries in ascending order.

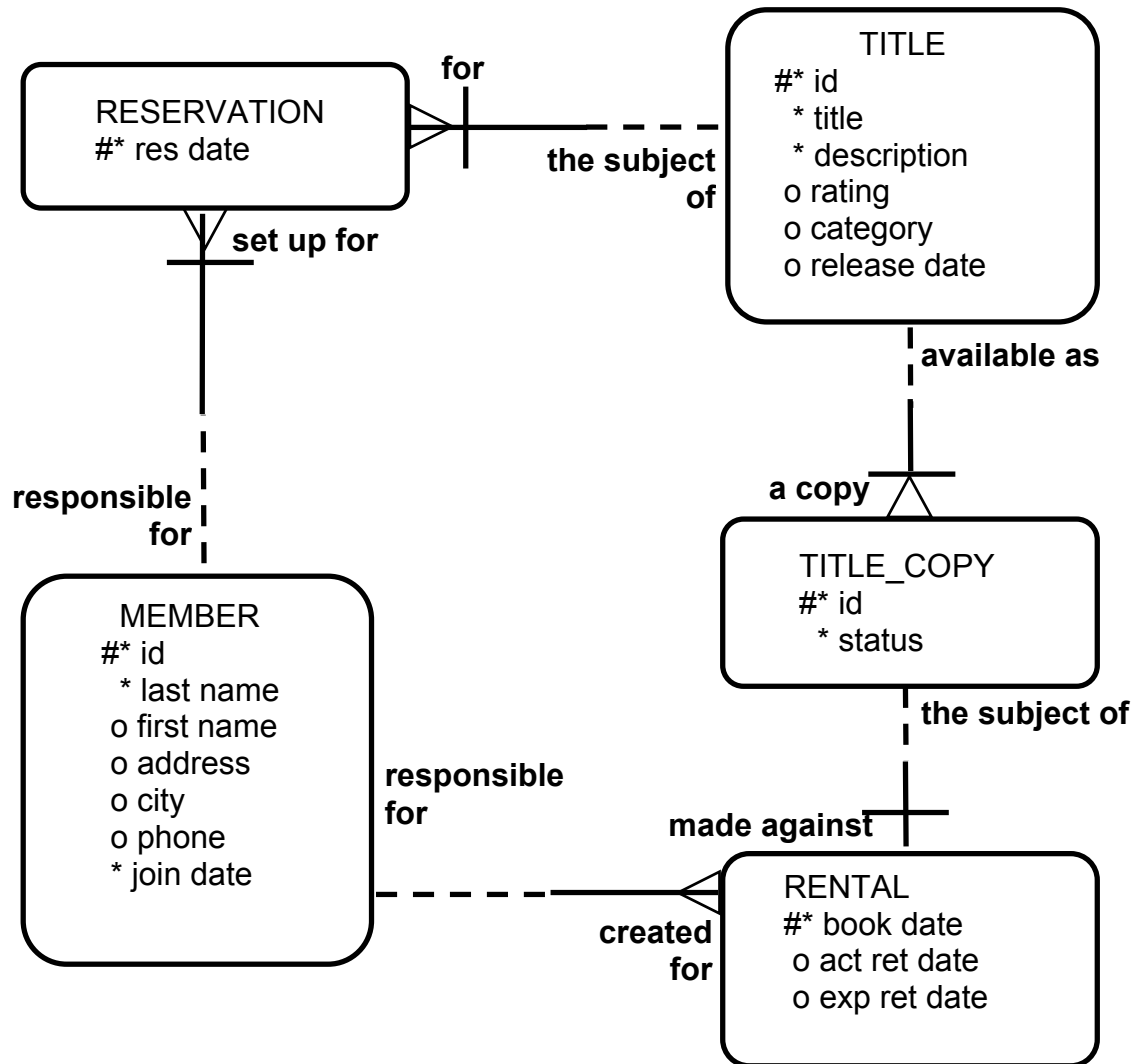

LAST_NAME	BIRTHDAY
Hunold	January 03
De Haan	January 13
Davies	January 29
Zlotkey	January 29
Lorentz	February 07
Hartstein	February 17
Matos	March 15
Taylor	March 24
Abel	May 11
Ernst	May 21
Grant	May 24
Higgins	June 07
Gietz	June 07
King	June 17
Vargas	July 09
Fay	August 17
Whalen	September 17
Kochhar	September 21
Rajs	October 17
Mourgos	November 16

20 rows selected.

Additional Practices: Case Study

In this case study, you build a set of database tables for a video application. After you create the tables, you insert, update, and delete records in a video store database and generate a report. The database contains only the essential tables.

The following is a diagram of the entities and attributes for the video application:

Note: If you want to build the tables, you can execute the commands in the `buildtab.sql` script in *iSQL*Plus*. If you want to drop the tables, you can execute the commands in the `dropvid.sql` script in *iSQL*Plus*. Then you can execute the commands in the `buildvid.sql` script in *iSQL*Plus* to create and populate the tables.

- If you use the `buildtab.sql` script to build the tables, start with step 4.
- If you use the `dropvid.sql` script to remove the video tables, start with step 1.
- If you use the `buildvid.sql` script to build and populate the tables, start with step 6(b).

Additional Practices: Case Study (continued)

1. Create the tables based on the following table instance charts. Choose the appropriate data types and be sure to add integrity constraints.

a. Table name: MEMBER

Column_ Name	MEMBER_ ID	LAST_ NAME	FIRST_NAME	ADDRESS	CITY	PHONE	JOIN _DATE
Key Type	PK						
Null/ Unique	NN,U	NN					NN
Default Value							System Date
Data Type	NUMBER	VARCHAR2	VARCHAR2	VARCHAR2	VARCHAR2	VARCHAR2	DATE
Length	10	25	25	100	30	15	

b. Table name: TITLE

Column_ Name	TITLE_ID	TITLE	DESCRIPTION	RATING	CATEGORY	RELEASE_ DATE
Key Type	PK					
Null/ Unique	NN,U	NN	NN			
Check				G, PG, R, NC17, NR	DRAMA, COMEDY, ACTION, CHILD, SCIFI, DOCUMENTARY	
Data Type	NUMBER	VARCHAR2	VARCHAR2	VARCHAR2	VARCHAR2	DATE
Length	10	60	400	4	20	

Additional Practices: Case Study (continued)

c. Table name: TITLE_COPY

Column Name	COPY_ID	TITLE_ID	STATUS
Key Type	PK	PK,FK	
Null/Unique	NN,U	NN,U	NN
Check			AVAILABLE, DESTROYED, RENTED, RESERVED
FK Ref Table		TITLE	
FK Ref Col		TITLE_ID	
Data Type	NUMBER	NUMBER	VARCHAR2
Length	10	10	15

d. Table name: RENTAL

Column Name	BOOK_DATE	MEMBER_ID	COPY_ID	ACT_RET_DATE	EXP_RET_DATE	TITLE_ID
Key Type	PK	PK,FK1	PK,FK2			PK,FK2
Default Value	System Date				System Date + 2 days	
FK Ref Table		MEMBER	TITLE_COPY			TITLE_COPY
FK Ref Col		MEMBER_ID	COPY_ID			TITLE_ID
Data Type	DATE	NUMBER	NUMBER	DATE	DATE	NUMBER
Length		10	10			10

Additional Practices: Case Study (continued)

e. Table name: RESERVATION

Column Name	RES_DATE	MEMBER_ID	TITLE_ID
Key Type	PK	PK,FK1	PK,FK2
Null/Unique	NN,U	NN,U	NN
FK Ref Table		MEMBER	TITLE
FK Ref Column		MEMBER_ID	TITLE_ID
Data Type	DATE	NUMBER	NUMBER
Length		10	10

2. Verify that the tables and constraints were created properly by checking the data dictionary.

TABLE_NAME
MEMBER
RENTAL
RESERVATION
TITLE
TITLE_COPY

CONSTRAINT_NAME	CON	TABLE_NAME
MEMBER_LAST_NAME_NN	C	MEMBER
MEMBER_JOIN_DATE_NN	C	MEMBER
MEMBER_MEMBER_ID_PK	P	MEMBER
RENTAL_BOOK_DATE_COPY_TITLE_PK	P	RENTAL
RENTAL_MEMBER_ID_FK	R	RENTAL

...

COPY_TITLE_ID_PK	P	TITLE_COPY
COPY_TITLE_ID_FK	R	TITLE_COPY

18 rows selected.

Additional Practices: Case Study (continued)

3. Create sequences to uniquely identify each row in the MEMBER table and the TITLE table.
 - a. Member number for the MEMBER table: Start with 101; do not allow caching of the values. Name the sequence MEMBER_ID_SEQ.
 - b. Title number for the TITLE table: Start with 92; do not allow caching of the values. Name the sequence TITLE_ID_SEQ.
 - c. Verify the existence of the sequences in the data dictionary.

SEQUENCE_NAME	INCREMENT_BY	LAST_NUMBER
MEMBER_ID_SEQ	1	101
TITLE_ID_SEQ	1	92

4. Add data to the tables. Create a script for each set of data to be added.
 - a. Add movie titles to the TITLE table. Write a script to enter the movie information. Save the statements in a script named lab_apcs_4a.sql. Use the sequences to uniquely identify each title. Enter the release dates in the DD-MON-YYYY format. Remember that single quotation marks in a character field must be specially handled. Verify your additions.

TITLE
Willie and Christmas Too
Alien Again
The Glob
My Day Off
Miracles on Ice
Soda Gang

6 rows selected.

Additional Practices: Case Study (continued)

Title	Description	Rating	Category	Release_date
Willie and Christmas Too	All of Willie's friends make a Christmas list for Santa, but Willie has yet to add his own wish list.	G	CHILD	05-OCT-1995
Alien Again	Yet another installation of science fiction history. Can the heroine save the planet from the alien life form?	R	SCIFI	19-MAY-1995
The Glob	A meteor crashes near a small American town and unleashes carnivorous goo in this classic.	NR	SCIFI	12-AUG-1995
My Day Off	With a little luck and a lot of ingenuity, a teenager skips school for a day in New York.	PG	COMEDY	12-JUL-1995
Miracles on Ice	A six-year-old has doubts about Santa Claus, but she discovers that miracles really do exist.	PG	DRAMA	12-SEP-1995
Soda Gang	After discovering a cache of drugs, a young couple find themselves pitted against a vicious gang.	NR	ACTION	01-JUN-1995

- b. Add data to the MEMBER table. Place the insert statements in a script named `lab_apcs_4b.sql`. Execute commands in the script. Be sure to use the sequence to add the member numbers.

First_Name	Last_Name	Address	City	Phone	Join_Date
Carmen	Velasquez	283 King Street	Seattle	206-899-6666	08-MAR-1990
LaDoris	Ngao	5 Modrany	Bratislava	586-355-8882	08-MAR-1990
Midori	Nagayama	68 Via Centrale	Sao Paolo	254-852-5764	17-JUN-1991
Mark	Quick-to-See	6921 King Way	Lagos	63-559-7777	07-APR-1990
Audry	Ropeburn	86 Chu Street	Hong Kong	41-559-87	18-JAN-1991
Molly	Urguhart	3035 Laurier	Quebec	418-542-9988	18-JAN-1991

Additional Practices: Case Study (continued)

c. Add the following movie copies in the `TITLE_COPY` table:

Note: Have the `TITLE_ID` numbers available for this exercise.

Title	Copy_Id	Status	Title	Copy_Id
Willie and Christmas Too	1	AVAILABLE	Willie and Christmas Too	1
Alien Again	1	AVAILABLE	Alien Again	1
	2	RENTED		2
The Glob	1	AVAILABLE	The Glob	1
My Day Off	1	AVAILABLE	My Day Off	1
	2	AVAILABLE		2
	3	RENTED		3
Miracles on Ice	1	AVAILABLE	Miracles on Ice	1
Soda Gang	1	AVAILABLE	Soda Gang	1

d. Add the following rentals to the `RENTAL` table:

Note: The title number may be different depending on the sequence number.

Title_Id	Copy_Id	Member_Id	Book_date	Exp_Ret_Date
92	1	101	3 days ago	1 day ago
93	2	101	1 day ago	1 day from now
95	3	102	2 days ago	Today
97	1	106	4 days ago	2 days ago

Additional Practices: Case Study (continued)

5. Create a view named `TITLE_AVAIL` to show the movie titles, the availability of each copy, and its expected return date if rented. Query all rows from the view. Order the results by title.

Note: Your results may be different.

TITLE	COPY_ID	STATUS	EXP_RET_DATE
Alien Again	1	AVAILABLE	
Alien Again	2	RENTED	12-FEB-04
Miracles on Ice	1	AVAILABLE	
My Day Off	1	AVAILABLE	
My Day Off	2	AVAILABLE	
My Day Off	3	RENTED	11-FEB-04
Soda Gang	1	AVAILABLE	09-FEB-04
The Glob	1	AVAILABLE	
Willie and Christmas Too	1	AVAILABLE	10-FEB-04

9 rows selected.

6. Make changes to data in the tables.
 - a. Add a new title. The movie is “Interstellar Wars,” which is rated PG and classified as a science fiction movie. The release date is 07-JUL-77. The description is “Futuristic interstellar action movie. Can the rebels save the humans from the evil empire?” Be sure to add a title copy record for two copies.
 - b. Enter two reservations. One reservation is for Carmen Velasquez, who wants to rent “Interstellar Wars.” The other is for Mark Quick-to-See, who wants to rent “Soda Gang.”

TITLE	COPY_ID	STATUS	EXP_RET_DATE
Alien Again	1	AVAILABLE	
Alien Again	2	RENTED	12-FEB-04
Interstellar Wars	1	RENTED	10-FEB-04
Interstellar Wars	2	AVAILABLE	
Miracles on Ice	1	AVAILABLE	
My Day Off	1	AVAILABLE	
My Day Off	2	AVAILABLE	
My Day Off	3	RENTED	11-FEB-04
Soda Gang	1	AVAILABLE	09-FEB-04
The Glob	1	AVAILABLE	
Willie and Christmas Too	1	AVAILABLE	10-FEB-04

11 rows selected.

Additional Practices: Case Study (continued)

7. Make a modification to one of the tables.

- a. Run the script in `lab_apcs_7a.sql` to add a `PRICE` column to the `TITLE` table to record the purchase price of the video. Verify your modifications.

Name	Null?	Type
TITLE_ID	NOT NULL	NUMBER(10)
TITLE	NOT NULL	VARCHAR2(60)
DESCRIPTION	NOT NULL	VARCHAR2(400)
RATING		VARCHAR2(4)
CATEGORY		VARCHAR2(20)
RELEASE_DATE		DATE
PRICE		NUMBER(8,2)

Title	Price
Willie and Christmas Too	25
Alien Again	35
The Glob	35
My Day Off	35
Miracles on Ice	30
Soda Gang	35
Interstellar Wars	29

- b. Create a script named `lab_apcs_7b.sql` that contains update statements that update each video with a price according to the preceding list. Run the commands in the script.
Note: Have the `TITLE_ID` numbers available for this exercise.

Additional Practices: Case Study (continued)

8. Create a report that contains each customer's history of renting videos. Be sure to include the customer name, movie rented, dates of the rental, and duration of rentals. Total the number of rentals for all customers for the reporting period. Save the commands that generate the report in a script file named `lab_apcs_8.sql`.

Note: Your results may be different.

MEMBER	TITLE	BOOK_DATE	DURATION
Carmen Velasquez	Alien Again	10-FEB-04	
Carmen Velasquez	Willie and Christmas Too	08-FEB-04	1
LaDoris Ngao	My Day Off	09-FEB-04	
Molly Uguhart	Soda Gang	07-FEB-04	2

Additional Practices: Solutions

Additional Practices: Solutions

These exercises can be used for extra practice after you have discussed the following topics: basic SQL SELECT statement, basic *iSQL*Plus* commands, and SQL functions.

1. The HR department needs to find data for all of the clerks who were hired after the year 1997.

```
SELECT *
FROM   employees
WHERE  job_id = 'ST_CLERK'
AND    hire_date > '31-DEC-1997';
```

2. The HR department needs a report of employees who earn commission. Show the last name, job, salary, and commission of those employees. Sort the data by salary in descending order.

```
SELECT last_name, job_id, salary, commission_pct
FROM   employees
WHERE  commission_pct IS NOT NULL
ORDER BY salary DESC;
```

3. For budgeting purposes, the HR department needs a report on projected raises. The report should display those employees who have no commission but who have a 10% raise in salary (round off the salaries).

```
SELECT 'The salary of '||last_name||' after a 10% raise is '
      || ROUND(salary*1.10) "New salary"
FROM   employees
WHERE  commission_pct IS NULL;
```

4. Create a report of employees and their length of employment. Show the last names of all employees together with the number of years and the number of completed months that they have been employed. Order the report by the length of their employment. The employee who has been employed the longest should appear at the top of the list.

```
SELECT last_name,
       TRUNC(MONTHS_BETWEEN(SYSDATE, hire_date) / 12) YEARS,
       TRUNC(MOD(MONTHS_BETWEEN(SYSDATE, hire_date), 12)) MONTHS
FROM   employees
ORDER BY years DESC, MONTHS desc;
```

Additional Practices: Solutions (continued)

5. Show those employees who have a last name starting with the letters *J*, *K*, *L*, or *M*.

```
SELECT last_name
FROM   employees
WHERE  SUBSTR(last_name, 1,1) IN ('J', 'K', 'L', 'M');
```

6. Create a report that displays all employees, and indicate with the words *Yes* or *No* whether they receive a commission. Use the DECODE expression in your query.

```
SELECT last_name, salary,
       decode(commission_pct, NULL, 'No', 'Yes') commission
FROM   employees;
```

Additional Practices: Solutions (continued)

These exercises can be used for extra practice after you have discussed the following topics: basic SQL SELECT statement, basic *iSQL*Plus* commands, SQL functions, joins, and group functions.

7. Create a report that displays the department name, location, name, job title, and salary of those employees who work in a specific location. Prompt the user for the location.

```
SELECT d.department_name, d.location_id, e.last_name, e.job_id, e.salary
FROM   employees e, departments d
WHERE  e.department_id = d.department_id
AND    d.location_id = &dept_no;
```

8. Find the number of employees who have a last name that ends with the letter *n*. Create two possible solutions.

```
SELECT COUNT(*)
FROM   employees
WHERE  last_name LIKE '%n';
--or
SELECT COUNT(*)
FROM   employees
WHERE  SUBSTR(last_name, -1) = 'n';
```

9. Create a report that shows the name, location, and number of employees for each department. Make sure that the report also includes departments without employees.

```
SELECT d.department_id, d.department_name,
       d.location_id, COUNT(e.employee_id)
FROM   employees e RIGHT OUTER JOIN departments d
ON     e.department_id = d.department_id
GROUP BY d.department_id, d.department_name, d.location_id;
```

10. The HR department needs to find the job titles in departments 10 and 20. Create a report to display the job IDs for those departments.

```
SELECT DISTINCT job_id
FROM   employees
WHERE  department_id IN (10, 20);
```

11. Create a report that displays the jobs that are found in the Administration and Executive departments. Also display the number of employees for these jobs. Show the job with the highest number of employees first.

```
SELECT e.job_id, count(e.job_id) FREQUENCY
FROM   employees e JOIN departments d
ON     e.department_id = d.department_id
WHERE  d.department_name IN ('Administration', 'Executive')
GROUP BY e.job_id
ORDER BY FREQUENCY DESC;
```

Additional Practices: Solutions (continued)

These exercises can be used for extra practice after you have discussed the following topics: basic SQL SELECT statements, basic *iSQL*Plus* commands, SQL functions, joins, group functions, and subqueries.

12. Show all employees who were hired in the first half of the month (before the 16th of the month).

```
SELECT last_name, hire_date
FROM   employees
WHERE  TO_CHAR(hire_date, 'DD') < 16;
```

13. Create a report that displays the following for all employees: last name, salary, and salary expressed in terms of thousands of dollars.

```
SELECT last_name, salary, TRUNC(salary, -3)/1000  Thousands
FROM   employees;
```

14. Show all employees who have managers with a salary higher than \$15,000. Show the following data: employee name, manager name, manager salary, and salary grade of the manager.

```
SELECT e.last_name, m.last_name manager, m.salary, j.grade_level
FROM   employees e JOIN employees m
ON     e.manager_id = m.employee_id
JOIN   job_grades j
ON     m.salary BETWEEN j.lowest_sal AND j.highest_sal
AND    m.salary > 15000;
```

15. Show the department number, name, number of employees, and average salary of all departments, together with the names, salaries, and jobs of the employees working in each department.

```
SELECT d.department_id, d.department_name,
       count(e1.employee_id) employees,
       NVL(TO_CHAR(AVG(e1.salary), '99999.99'), 'No average' ) avg_sal,
       e2.last_name, e2.salary, e2.job_id
FROM   departments d RIGHT OUTER JOIN employees e1
ON     d.department_id = e1.department_id
RIGHT OUTER JOIN employees e2
ON     d.department_id = e2.department_id
GROUP BY d.department_id, d.department_name, e2.last_name, e2.salary,
         e2.job_id
ORDER BY d.department_id, employees;
```

Additional Practices: Solutions (continued)

16. Create a report to display the department number and lowest salary of the department with the highest average salary.

```
SELECT department_id, MIN(salary)
FROM   employees
GROUP BY department_id
HAVING AVG(salary) = (SELECT MAX(AVG(salary))
                     FROM   employees
                     GROUP BY department_id);
```

17. Create a report that displays departments where no sales representatives work. Include the department number, department name, and location in the output.

```
SELECT *
FROM   departments
WHERE  department_id NOT IN(SELECT department_id
                           FROM employees
                           WHERE job_id = 'SA_REP'
                           AND department_id IS NOT NULL);
```

18. Create the following statistical reports for the HR department: Include the department number, department name, and the number of employees working in each department that:

- a. Employs fewer than three employees:

```
SELECT d.department_id, d.department_name, COUNT(*)
FROM   departments d JOIN employees e
ON     d.department_id = e.department_id
GROUP BY d.department_id, d.department_name
HAVING COUNT(*) < 3;
```

- b. Has the highest number of employees:

```
SELECT d.department_id, d.department_name, COUNT(*)
FROM   departments d JOIN employees e
ON     d.department_id = e.department_id
GROUP BY d.department_id, d.department_name
HAVING COUNT(*) = (SELECT MAX(COUNT(*))
                  FROM   employees
                  GROUP BY department_id);
```

Additional Practices: Solutions (continued)

c. Has the lowest number of employees:

```
SELECT d.department_id, d.department_name, COUNT(*)
FROM   departments d JOIN employees e
ON     d.department_id = e.department_id
GROUP BY d.department_id, d.department_name
HAVING COUNT(*) = (SELECT MIN(COUNT(*))
                   FROM   employees
                   GROUP BY department_id);
```

19. Create a report that displays the employee number, last name, salary, department number, and the average salary in their department for all employees.

```
SELECT e.employee_id, e.last_name, e.department_id, e.salary,
AVG(s.salary)
FROM   employees e JOIN employees s
ON     e.department_id = s.department_id
GROUP BY e.employee_id, e.last_name, e.department_id, e.salary;
```

20. Show all employees who were hired on the day of the week on which the highest number of employees were hired.

```
SELECT last_name, TO_CHAR(hire_date, 'DAY') day
FROM   employees
WHERE  TO_CHAR(hire_date, 'Day') =
      (SELECT TO_CHAR(hire_date, 'Day')
       FROM   employees
       GROUP BY TO_CHAR(hire_date, 'Day')
       HAVING COUNT(*) = (SELECT MAX(COUNT(*))
                          FROM   employees
                          GROUP BY TO_CHAR(hire_date, 'Day')));
```

21. Create an anniversary overview based on the hire date of the employees. Sort the anniversaries in ascending order.

```
SELECT last_name, TO_CHAR(hire_date, 'Month DD') BIRTHDAY
FROM   employees
ORDER BY TO_CHAR(hire_date, 'DDD');
```

Additional Practices: Case Study Solutions

1. Create the tables based on the following table instance charts. Choose the appropriate data types and be sure to add integrity constraints.

- a. Table name: MEMBER

```
CREATE TABLE member
(member_id      NUMBER(10)
 CONSTRAINT member_member_id_pk PRIMARY KEY,
 last_name      VARCHAR2(25)
 CONSTRAINT member_last_name_nn NOT NULL,
 first_name     VARCHAR2(25),
 address        VARCHAR2(100),
 city           VARCHAR2(30),
 phone          VARCHAR2(15),
 join_date      DATE DEFAULT SYSDATE
 CONSTRAINT member_join_date_nn NOT NULL);
```

- b. Table name: TITLE

```
CREATE TABLE title
(title_id       NUMBER(10)
 CONSTRAINT title_title_id_pk PRIMARY KEY,
 title          VARCHAR2(60)
 CONSTRAINT title_title_nn NOT NULL,
 description     VARCHAR2(400)
 CONSTRAINT title_description_nn NOT NULL,
 rating         VARCHAR2(4)
 CONSTRAINT title_rating_ck CHECK
 (rating IN ('G', 'PG', 'R', 'NC17', 'NR')),
 category       VARCHAR2(20)
 CONSTRAINT title_category_ck CHECK
 (category IN ('DRAMA', 'COMEDY', 'ACTION',
 'CHILD', 'SCIFI', 'DOCUMENTARY')),
 release_date   DATE);
```

- c. Table name: TITLE_COPY

```
CREATE TABLE title_copy
(copy_id        NUMBER(10),
 title_id       NUMBER(10)
 CONSTRAINT title_copy_title_id_fk REFERENCES title(title_id),
 status         VARCHAR2(15)
 CONSTRAINT title_copy_status_nn NOT NULL
 CONSTRAINT title_copy_status_ck CHECK (status IN
 ('AVAILABLE', 'DESTROYED', 'RENTED', 'RESERVED')),
 CONSTRAINT title_copy_copy_id_title_id_pk
 PRIMARY KEY (copy_id, title_id));
```

Additional Practices: Case Study Solutions (continued)

d. Table name: RENTAL

```
CREATE TABLE rental
  (book_date      DATE DEFAULT SYSDATE,
   member_id      NUMBER(10)
     CONSTRAINT rental_member_id_fk REFERENCES member(member_id),
   copy_id        NUMBER(10),
   act_ret_date   DATE,
   exp_ret_date   DATE DEFAULT SYSDATE + 2,
   title_id       NUMBER(10),
   CONSTRAINT rental_book_date_copy_title_pk
     PRIMARY KEY (book_date, member_id, copy_id, title_id),
   CONSTRAINT rental_copy_id_title_id_fk
     FOREIGN KEY (copy_id, title_id)
       REFERENCES title_copy(copy_id, title_id));
```

e. Table name: RESERVATION

```
CREATE TABLE reservation
  (res_date       DATE,
   member_id      NUMBER(10)
     CONSTRAINT reservation_member_id REFERENCES member(member_id),
   title_id       NUMBER(10)
     CONSTRAINT reservation_title_id REFERENCES title(title_id),
   CONSTRAINT reservation_resdate_mem_tit_pk PRIMARY KEY
     (res_date, member_id, title_id));
```

2. Verify that the tables and constraints were created properly by checking the data dictionary.

```
SELECT table_name
FROM user_tables
WHERE table_name IN ('MEMBER', 'TITLE', 'TITLE_COPY',
                    'RENTAL', 'RESERVATION');

SELECT constraint_name, constraint_type, table_name
FROM user_constraints
WHERE table_name IN ('MEMBER', 'TITLE', 'TITLE_COPY',
                    'RENTAL', 'RESERVATION');
```

Additional Practices: Case Study Solutions (continued)

3. Create sequences to uniquely identify each row in the MEMBER table and the TITLE table.
 - a. Member number for the MEMBER table: Start with 101; do not allow caching of the values. Name the sequence MEMBER_ID_SEQ.

```
CREATE SEQUENCE member_id_seq
START WITH 101
NOCACHE;
```

- b. Title number for the TITLE table: Start with 92; do not allow caching of the values. Name the sequence TITLE_ID_SEQ.

```
CREATE SEQUENCE title_id_seq
START WITH 92
NOCACHE;
```

- c. Verify the existence of the sequences in the data dictionary.

```
SELECT sequence_name, increment_by, last_number
FROM user_sequences
WHERE sequence_name IN ('MEMBER_ID_SEQ', 'TITLE_ID_SEQ');
```

Additional Practices: Case Study Solutions (continued)

4. Add data to the tables. Create a script for each set of data to be added.
 - a. Add movie titles to the TITLE table. Write a script to enter the movie information. Save the statements in a script named `lab_apcs_4a.sql`. Use the sequences to uniquely identify each title. Enter the release dates in the DD-MON-YYYY format. Remember that single quotation marks in a character field must be specially handled. Verify your additions.

```
INSERT INTO title(title_id, title, description, rating,
                  category, release_date)
VALUES (title_id_seq.NEXTVAL, 'Willie and Christmas Too',
       'All of Willie's friends make a Christmas list for
       Santa, but Willie has yet to add his own wish list.',
       'G', 'CHILD', TO_DATE('05-OCT-1995','DD-MON-YYYY'))
/
INSERT INTO title(title_id, title, description, rating,
                  category, release_date)
VALUES (title_id_seq.NEXTVAL, 'Alien Again', 'Yet another
       installment of science fiction history. Can the
       heroine save the planet from the alien life form?',
       'R', 'SCIFI', TO_DATE('19-MAY-1995','DD-MON-YYYY'))
/
INSERT INTO title(title_id, title, description, rating,
                  category, release_date)
VALUES (title_id_seq.NEXTVAL, 'The Glob', 'A meteor crashes
       near a small American town and unleashes carnivorous
       goo in this classic.', 'NR', 'SCIFI',
       TO_DATE('12-AUG-1995','DD-MON-YYYY'))
/
INSERT INTO title(title_id, title, description, rating,
                  category, release_date)
VALUES (title_id_seq.NEXTVAL, 'My Day Off', 'With a little
       luck and a lot ingenuity, a teenager skips school for
       a day in New York.', 'PG', 'COMEDY',
       TO_DATE('12-JUL-1995','DD-MON-YYYY'))
/
...
COMMIT
/
SELECT title
FROM title;
```

Additional Practices: Case Study Solutions (continued)

- b. Add data to the MEMBER table. Place the insert statements in a script named lab_apcs_4b.sql. Execute commands in the script. Be sure to use the sequence to add the member numbers.

```
SET VERIFY OFF
INSERT INTO member(member_id, first_name, last_name,
                  address, city, phone, join_date)
VALUES (member_id_seq.NEXTVAL, 'Carmen', 'Velasquez',
        '283 King Street', 'Seattle', '206-899-6666', TO_DATE('08-MAR-
1990',
        'DD-MM-YYYY'))
/
INSERT INTO member(member_id, first_name, last_name,
                  address, city, phone, join_date)
VALUES (member_id_seq.NEXTVAL, 'LaDoris', 'Ngao',
        '5 Modrany', 'Bratislava', '586-355-8882', TO_DATE('08-MAR-1990',
        'DD-MM-YYYY'))
/
INSERT INTO member(member_id, first_name, last_name,
                  address, city, phone, join_date)
VALUES (member_id_seq.NEXTVAL, 'Midori', 'Nagayama',
        '68 Via Centrale', 'Sao Paolo', '254-852-5764', TO_DATE('17-JUN-
1991',
        'DD-MM-YYYY'))
/
INSERT INTO member(member_id, first_name, last_name,
                  address, city, phone, join_date)
VALUES (member_id_seq.NEXTVAL, 'Mark', 'Quick-to-See',
        '6921 King Way', 'Lagos', '63-559-7777', TO_DATE('07-APR-1990',
        'DD-MM-YYYY'))
/
INSERT INTO member(member_id, first_name, last_name,
                  address, city, phone, join_date)
VALUES (member_id_seq.NEXTVAL, 'Audry', 'Ropeburn',
        '86 Chu Street', 'Hong Kong', '41-559-87', TO_DATE('18-JAN-1991',
        'DD-MM-YYYY'))
/
INSERT INTO member(member_id, first_name, last_name,
                  address, city, phone, join_date)
VALUES (member_id_seq.NEXTVAL, 'Molly', 'Urguhart',
        '3035 Laurier', 'Quebec', '418-542-9988', TO_DATE('18-JAN-1991',
        'DD-MM-YYYY'));
/
COMMIT
SET VERIFY ON
```

Additional Practices: Case Study Solutions (continued)

- c. Add the following movie copies in the TITLE_COPY table:

Note: Have the TITLE_ID numbers available for this exercise.

```
INSERT INTO title_copy(copy_id, title_id, status)
VALUES (1, 92, 'AVAILABLE')
/
INSERT INTO title_copy(copy_id, title_id, status)
VALUES (1, 93, 'AVAILABLE')
/
INSERT INTO title_copy(copy_id, title_id, status)
VALUES (2, 93, 'RENTED')
/
INSERT INTO title_copy(copy_id, title_id, status)
VALUES (1, 94, 'AVAILABLE')
/
INSERT INTO title_copy(copy_id, title_id, status)
VALUES (1, 95, 'AVAILABLE')
/
INSERT INTO title_copy(copy_id, title_id, status)
VALUES (2, 95, 'AVAILABLE')
/
INSERT INTO title_copy(copy_id, title_id, status)
VALUES (3, 95, 'RENTED')
/
INSERT INTO title_copy(copy_id, title_id, status)
VALUES (1, 96, 'AVAILABLE')
/
INSERT INTO title_copy(copy_id, title_id, status)
VALUES (1, 97, 'AVAILABLE')
/
```

Additional Practices: Case Study Solutions (continued)

- d. Add the following rentals to the RENTAL table:

Note: The title number may be different depending on the sequence number.

```
INSERT INTO rental(title_id, copy_id, member_id,
                  book_date, exp_ret_date, act_ret_date)
VALUES (92, 1, 101, sysdate-3, sysdate-1, sysdate-2)
/
INSERT INTO rental(title_id, copy_id, member_id,
                  book_date, exp_ret_date, act_ret_date)
VALUES (93, 2, 101, sysdate-1, sysdate-1, NULL)
/
INSERT INTO rental(title_id, copy_id, member_id,
                  book_date, exp_ret_date, act_ret_date)
VALUES (95, 3, 102, sysdate-2, sysdate, NULL)
/
INSERT INTO rental(title_id, copy_id, member_id,
                  book_date, exp_ret_date, act_ret_date)
VALUES (97, 1, 106, sysdate-4, sysdate-2, sysdate-2)
/
COMMIT
/
```

5. Create a view named TITLE_AVAIL to show the movie titles, the availability of each copy, and its expected return date if rented. Query all rows from the view. Order the results by title.

Note: Your results may be different.

```
CREATE VIEW title_avail AS
  SELECT  t.title, c.copy_id, c.status, r.exp_ret_date
  FROM    title t JOIN title_copy c
  ON      t.title_id = c.title_id
  FULL OUTER JOIN rental r
  ON      c.copy_id = r.copy_id
  AND     c.title_id = r.title_id;

SELECT  *
FROM    title_avail
ORDER BY title, copy_id;
```

Additional Practices: Case Study Solutions (continued)

6. Make changes to data in the tables.

- a. Add a new title. The movie is “Interstellar Wars,” which is rated PG and classified as a science fiction movie. The release date is 07-JUL-77. The description is “Futuristic interstellar action movie. Can the rebels save the humans from the evil empire?” Be sure to add a title copy record for two copies.

```
INSERT INTO title(title_id, title, description, rating,
                  category, release_date)
VALUES (title_id_seq.NEXTVAL, 'Interstellar Wars',
        'Futuristic interstellar action movie. Can the
        rebels save the humans from the evil empire?',
        'PG', 'SCIFI', '07-JUL-77')
/
INSERT INTO title_copy (copy_id, title_id, status)
VALUES (1, 98, 'AVAILABLE')
/
INSERT INTO title_copy (copy_id, title_id, status)
VALUES (2, 98, 'AVAILABLE')
/
```

- b. Enter two reservations. One reservation is for Carmen Velasquez, who wants to rent “Interstellar Wars.” The other is for Mark Quick-to-See, who wants to rent “Soda Gang.”

```
INSERT INTO reservation (res_date, member_id, title_id)
VALUES (SYSDATE, 101, 98)
/
INSERT INTO reservation (res_date, member_id, title_id)
VALUES (SYSDATE, 104, 97)
/
```

7. Make a modification to one of the tables.

- a. Run the script in lab_apcs_7a.sql to add a PRICE column to the TITLE table to record the purchase price of the video. Verify your modifications.

```
ALTER TABLE title
ADD (price NUMBER(8,2));

DESCRIBE title
```

Additional Practices: Case Study Solutions (continued)

- b. Create a script named `lab_apcs_7b.sql` that contains update statements that update each video with a price according to the list provided. Run the commands in the script.

Note: Have the `TITLE_ID` numbers available for this exercise.

```
SET ECHO OFF
SET VERIFY OFF
UPDATE title
SET     price = &price
WHERE  title_id = &title_id;
SET VERIFY OFF
SET ECHO OFF
```

8. Create a report that contains each customer's history of renting videos. Be sure to include the customer name, movie rented, dates of the rental, and duration of rentals. Total the number of rentals for all customers for the reporting period. Save the commands that generate the report in a script file named `lab_apcs_8.sql`.

Note: Your results may be different.

```
SET ECHO OFF
SET VERIFY OFF
SELECT  m.first_name||' '||m.last_name MEMBER, t.title,
        r.book_date, r.act_ret_date - r.book_date DURATION
FROM    member m, title t, rental r
WHERE   r.member_id = m.member_id
AND     r.title_id = t.title_id
ORDER BY member;

SET VERIFY ON
SET ECHO ON
```
